Particle Accelerators, Colliders, and the Story of High Energy Physics: Charming the Cosmic Snake
Raghavan Jayakumar

The Nordic mythological Cosmic Serpent, Ouroboros, is said to be coiled in the depths of the sea, surrounding the Earth with its tail in its mouth. In physics, this snake is a metaphor for the Universe, where the head, symbolizing the largest entity – the Cosmos – is one with the tail, symbolizing the smallest – the fundamental particle.

Particle accelerators, colliders and detectors are built by physicists and engineers to uncover the nature of the Universe while discovering its building blocks. “Charming the Cosmic Snake” takes the readers through the science behind these experimental machines: the physics principles that each stage of the development of particle accelerators helped to reveal, and the particles they helped to discover. The book culminates with a description of the Large Hadron Collider, one of the world’s largest and most complex machines operating in a 27-km circumference tunnel near Geneva. That collider may prove or disprove many of our basic theories about the nature of matter.

The book provides the material honestly without misrepresenting the science for the sake of excitement or glossing over difficult notions. The principles behind each type of accelerator is made accessible to the undergraduate student and even to a lay reader with cartoons, illustrations and metaphors. Simultaneously, the book also caters to different levels of reader’s background and provides additional materials for the more interested or diligent reader.

Every individual has many questions above. They should answer that question simply because just their can do this. It said that about guide. Book is familiar on every person. Yes, it is appropriate. Because start from on kindergarten until university need this specific Particle Accelerators, Colliders, and the Story of High Energy Physics: Charming the Cosmic Snake to read.

Nicholas Valles:

The ability that you get from Particle Accelerators, Colliders, and the Story of High Energy Physics: Charming the Cosmic Snake may be the more deep you rooting the information that hide inside the words the more you get enthusiastic about reading it. It doesn't mean that this book is hard to comprehend but Particle Accelerators, Colliders, and the Story of High Energy Physics: Charming the Cosmic Snake giving you buzz feeling of reading. The author conveys their point in a number of way that can be understood by simply anyone who read this because the author of this book is well-known enough. This book also makes your current vocabulary increase well. So it is easy to understand then can go along, both in printed or e-book style are available. We recommend you for having this Particle Accelerators, Colliders, and the Story of High Energy Physics: Charming the Cosmic Snake instantly.

Charles Melendez:

Reading a book to be new life style in this year; every people loves to study a book. When you examine a book you can get a wide range of benefit. When you read ebooks, you can improve your knowledge, mainly because book has a lot of information into it. The information that you will get depend on what forms of book that you have read. In order to get information about your research, you can read education books, but if you act like you want to entertain yourself look for a fiction books, such us novel, comics, along with soon. The Particle Accelerators, Colliders, and the Story of High Energy Physics: Charming the Cosmic Snake provide you with new experience in reading through a book.

John Martin:

Is it an individual who having spare time subsequently spend it whole day by means of watching television programs or just lying down on the bed? Do you need something new? This Particle Accelerators, Colliders, and the Story of High Energy Physics: Charming the Cosmic Snake can be the respond to, oh how comes? The new book you know. You are so out of date, spending your free time by reading in this brand-new era is common not a geek activity. So what these guides have than the others?
