How to Succeed at Understanding Gravity M Hatcher
Gravity Physics explained from a quantized gravity collision theory and quantized photon collision theory perspective. Introduces the concept of discontinuous, discreet, free-state and bound-state quantum mass and photon quantum perspectives as applied to General Relativity continuous mathematics. Provides a brief introduction to General Relativity continuous 4-velocity Riemann Tensor mathematics from a discreet, discontinuous, quantized collision theory mathematics perspective and implications to the Standard Model. Note:This book is an incomplete and evolving research manuscript which will correct syntax and errors in logic as they are discovered or validated by experiment in future theoretical investigations. Version 4.0 adds Heisenberg uncertainty for gravity, reasons for composite image "illusions" as a consequence of special relativity and adds energy, dark matter, dark energy equivalence concepts. Version 3.0 adds a chapter on Quantum Gravity, solutions to objections to collision theory approaches, detailed derivations for General Relativity, relationship to Gauss's Law and adds glossary definitions for matrix and group theory. Version 4.0 will provide more rigorous mathematics as quantum derivations and gravity derivations are explored in the companion books, "How to Succeed at Understanding Quantum Field Theory" and "How to Succeed at Understanding Newtonian Physics" M. Hatcher. This book is a more rigorous companion book to "How to Succeed at Understanding the Universe" and "How to Succeed at Understanding Physics; Alternative Physics".
