The Death of Core Competency: A management guide to cloud computing and the zero-friction future
Michael O'Neil
It is clear that cloud computing represents a sea change in the delivery of IT-dependent business services…but how does it shape enterprise priorities and actions? In The Death of Core Competency: A management guide to cloud computing and the zero-friction future, Michael O'Neil argues that in the 'day of cloud', the key issue is a newfound ability to apply cloud-based automation within each business task and across all corporate processes, creating an entirely new enterprise operating model. Executives who focus tightly on a handful of core competencies will see their enterprises eclipsed by firms led by management that is in tune with the efficiency gains, the expanded reach and the vastly improved business insight that a cloud business infrastructure delivers. The Death of Core Competency doesn't stop with this executive guidance. The book also includes a 12-step guide to building a strategic framework for introducing, expanding and connecting cloud-based business capabilities throughout the enterprise. A detailed 'workshopping' section delivers research, experience-based insight and practical guidance on business planning and cloud adoption. And a concluding 'roles and responsibilities' analysis looks at what the enterprise and its staff members, IT management and corporate executives need to understand – and do – to move beyond the limits of core competency and capitalize on the zero-friction future.
