Food Webs (MPB-50) (Monographs in Population Biology)

Kevin S. McCann

Food Webs (MPB-50) (Monographs in Population Biology) Kevin S. McCann

Human impacts are dramatically altering our natural ecosystems but the exact repercussions on ecological sustainability and function remain unclear. As a result, food web theory has experienced a proliferation of research seeking to address these critical areas. Arguing that the various recent and classical food web theories can be looked at collectively and in a highly consistent and testable way, *Food Webs* synthesizes and reconciles modern and classical perspectives into a general unified theory.

Kevin McCann brings together outcomes from population-, community-, and ecosystem-level approaches under the common currency of energy or material fluxes. He shows that these approaches--often studied in isolation--all have the same general implications in terms of population dynamic stability. Specifically, increased fluxes of energy or material tend to destabilize populations, communities, and whole ecosystems. With this understanding, stabilizing structures at different levels of the ecological hierarchy can be identified and any population-, community-, or ecosystem-level structures that mute energy or material flow also stabilize systems dynamics. McCann uses this powerful general framework to discuss the effects of human impact on the stability and sustainability of ecological systems, and he demonstrates that there is clear empirical evidence that the structures supporting ecological systems have been dangerously eroded.

Uniting the latest research on food webs with classical theories, this book will be a standard source in the understanding of natural food web functions.

From reader reviews:

Harold Froelich:

In this 21st millennium, people become competitive in every way. By being competitive at this point, people have do something to make these survives, being in the middle of the particular crowded place and notice by means of surrounding. One thing that at times many people have underestimated the idea for a while is reading. Yep, by reading a publication your ability to survive boost then having chance to stand up than other is high. In your case who want to start reading a new book, we give you this kind of Food Webs (MPB-50) (Monographs in Population Biology) book as nice and daily reading book. Why, because this book is greater than just a book.

Genoveva Johnson:

Reading can called head hangout, why? Because if you find yourself reading a book particularly book entitled Food Webs (MPB-50) (Monographs in Population Biology) the mind will drift away trough every dimension, wandering in each aspect that maybe unidentified for but surely can become your mind friends. Imaging every single word written in a e-book then become one type conclusion and explanation this maybe you never get before. The Food Webs (MPB-50) (Monographs in Population Biology) giving you another experience more than blown away your head but also giving you useful data for your better life with this era. So now let us teach you the relaxing pattern is your body and mind will be pleased when you are finished studying it, like winning a sport. Do you want to try this extraordinary paying spare time activity?

Joyce Jacobs:

The book untitled Food Webs (MPB-50) (Monographs in Population Biology) contain a lot of information on the item. The writer explains your ex idea with easy technique. The language is very clear to see all the people, so do definitely not worry, you can easy to read the item. The book was written by famous author. The author will bring you in the new period of time of literary works. It is easy to read this book because you can read on your smart phone, or product, so you can read the book inside anywhere and anytime. If you want to buy the e-book, you can available their official web-site as well as order it. Have a nice learn.

Martha Bryant:

As we know that book is significant thing to add our information for everything. By a book we can know everything you want. A book is a group of written, printed, illustrated or maybe blank sheet. Every year seemed to be exactly added. This reserve Food Webs (MPB-50) (Monographs in Population Biology) was filled in relation to science. Spend your spare time to add your knowledge about your research competence. Some people has diverse feel when they reading some sort of book. If you know how big advantage of a book, you can experience enjoy to read a guide. In the modern era like at this point, many ways to get book that you just wanted.
