# Theoretical Neuroscience: Computational and Mathematical Modeling of Neural Systems

*Peter Dayan, L. F. Abbott*

**Theoretical Neuroscience: Computational and Mathematical Modeling of Neural Systems** Peter Dayan, L. F. Abbott
Theoretical neuroscience provides a quantitative basis for describing what nervous systems do, determining how they function, and uncovering the general principles by which they operate. This text introduces the basic mathematical and computational methods of theoretical neuroscience and presents applications in a variety of areas including vision, sensory-motor integration, development, learning, and memory.

The book is divided into three parts. Part I discusses the relationship between sensory stimuli and neural responses, focusing on the representation of information by the spiking activity of neurons. Part II discusses the modeling of neurons and neural circuits on the basis of cellular and synaptic biophysics. Part III analyzes the role of plasticity in development and learning. An appendix covers the mathematical methods used, and exercises are available on the book's Web site.

**From reader reviews:**

**Donna Macdonald:**

The publication untitled Theoretical Neuroscience: Computational and Mathematical Modeling of Neural Systems is the publication that recommended to you to learn. You can see the quality of the publication content that will be shown to a person. The language that publisher use to explained their ideas are easily to understand. The author was did a lot of investigation when write the book, hence the information that they share to you personally is absolutely accurate. You also might get the e-book of Theoretical Neuroscience: Computational and Mathematical Modeling of Neural Systems from the publisher to make you much more enjoy free time.

**Lisa Jennings:**

Spent a free time for you to be fun activity to try and do! A lot of people spent their free time with their family, or their own friends. Usually they carrying out activity like watching television, planning to beach, or picnic inside park. They actually doing same thing every week. Do you feel it? Do you wish to something different to fill your own free time/ holiday? Could possibly be reading a book could be option to fill your free of charge time/ holiday. The first thing that you ask may be what kinds of book that you should read. If you want to attempt look for book, may be the reserve untitled Theoretical Neuroscience: Computational and Mathematical Modeling of Neural Systems can be very good book to read. May be it may be best activity to you.

**Darlene Heckart:**

People live in this new time of lifestyle always make an effort to and must have the spare time or they will get large amount of stress from both everyday life and work. So , once we ask do people have extra time, we will say absolutely yes. People is human not only a robot. Then we ask again, what kind of activity are you experiencing when the spare time coming to an individual of course your answer will certainly unlimited right. Then do you try this one, reading publications. It can be your alternative inside spending your spare time, typically the book you have read is definitely Theoretical Neuroscience: Computational and Mathematical Modeling of Neural Systems.

**Eric Hodges:**

Playing with family in a very park, coming to see the water world or hanging out with pals is thing that usually you have done when you have spare time, then why you don't try issue that really opposite from that. One activity that make you not feeling tired but still relaxing, trilling like on roller coaster you already been ride on and with addition of information. Even you love Theoretical Neuroscience: Computational and Mathematical Modeling of Neural Systems, you may enjoy both. It is fine combination right, you still wish to miss it? What kind of hangout type is it? Oh can happen its mind hangout people. What? Still don't get it, oh come on its identified as reading friends.
